

الجامعة التكنولوجية

قسم هندسة السيطرة والنظم

مواد الامتحان التنافسي للعام الدراسي (2024-2025)

تخصص ماجستير هندسة الحاسبات

تفاصيل المفردات	اسم المادة	ت
<p>1. Register transfer and Micro-operation.</p> <p>2. Register transfer language Bus and memory transfer.</p> <p>3. Arithmetic logic shift unit.</p> <p>4. Arithmetic logic, and shift micro-operations, Micro-programmed control unit, Control memory, Micro-program sequencer.</p> <p>5. Design of control unit.</p> <p>6. Central processing unit.</p> <p>7. General register organization, Stack organization, Memory stack,</p> <p>8. Instruction format.</p> <p>9. Addressing modes.</p> <p>10. Types of interrupts.</p> <p>11. Memory Systems.</p> <p>12. Input-output organization Peripheral devices, Modes of transfer.</p> <p>13. Direct memory access (DMA), Priority interrupt.</p> <p>14.Parallelism in uniprocessor system</p> <p>15.Comparison between parallelism and pipelining Memory systems Organization, interleaving (high order, low order), Local memory types.</p> <p>16. Pipelining: General principles, Arithmetic pipeline, design example pipeline adder.</p> <p>17. Pipeline analysis (timing, control): Reservation table, states, Collision & collision vector analysis, hardware initiation, State diagram, Modified state diagram, Micro-programmed pipeline.</p> <p>18.Vector processing: Vector instruction, vector processor, Typical Hardware architecture.</p>	<p>Advanced Computer Architecture (مرحلة ثالثة + رابعة)</p>	١
<p>-Introduction:</p> <p>1. What Operating Systems Do.</p> <p>2. Computer-System Organization.</p> <p>3. Computer-System Architecture.</p> <p>4. Operating-System Structure.</p>	<p>Operating System (OS) (المرحلة الرابعة)</p>	٢

مواد الامتحان التنافسي للعام الدراسي (2025-2024)

تخصص ماجستير هندسة الحاسبات

<p>5. Operating-System Operations.</p> <p>6. Computing Environments.</p> <p>7. Open-Source Operating Systems.</p> <p>Processes management:</p> <p>1. Process Concept (the process, process state, process control block).</p> <p>2. Operations on Processes.</p> <p>3. Process Scheduling (long term, short term scheduling, scheduling queue).</p> <p>4. CPU scheduling.</p> <p>5. Basic concepts (CPU & I/O Burst cycle, dispatcher, preemptive & non-preemptive scheduling).</p> <p>6. Scheduling Criteria.</p> <p>7. Scheduling Algorithms.</p> <p>8. FCFS, SJF, SRTF, RR,MLQ, MLFBQ.</p> <p>-Process Synchronization:</p> <p>1. Background.</p> <p>2. The Critical-Section Problem.</p> <p>3. Peterson's Solution.</p> <p>4. Mutex Locks.</p> <p>5. Semaphores.</p> <p>6. Classic Problems of Synchronization.</p> <p>-Deadlocks:</p> <p>1. System Model.</p> <p>2. Deadlock Characterization.</p> <p>3. Methods for Handling Deadlocks.</p> <p>4. Deadlock Prevention.</p> <p>5. Deadlock Avoidance.</p> <p>6. Deadlock Detection.</p> <p>7. Recovery from Deadlock.</p> <p>-Main Memory:</p> <p>1. Background.</p> <p>2. Swapping.</p> <p>3. Contiguous Memory Allocation.</p> <p>4. Segmentation.</p> <p>5. Paging.</p>

مواد الامتحان التنافسي للعام الدراسي (2025-2024)

تخصص ماجستير هندسة الحاسبات

<p>1. Network Types 2. Network Topology 3. Transmission Media 4. Network Components 5. The TCP/IP Protocol Layers: (Design Issues for the Layers) 6. The Link Layer 7. The Services Provided by the Link Layer, Error detection and Correction, Random Access Protocols 8. Transport-layer protocol 9. Transmission Control Protocol TCP (Connection Establishment), User Datagram Protocol UDP Network Layer (a) Routing Algorithms. The Link-State (LS) Routing Algorithm. Distance vector routing. (b) IPv4 Addresses. Classless Addressing. Classful Addressing. (c) Computer and Network Security.</p>	<p>Computer Networks (مرحلة رابعة)</p>	<p>٣</p>
<p>1. Neural networks (NNs) : -Artificial Neuron Types of Activation functions types of NNs (Feed-forward, Feedback, Supervised and Unsupervised), and types of recall. - Learning Algorithms: Hebbians, perceptron and delta learning rules. - Generalized delta learning rule (Error back propagation algorithm for single and multiple layers. 2. Fuzzy Logic (FL) : - Introduction, Fuzzy concepts, Fuzzy sets, and Fuzzy operations. - Fuzzification, Inference Engine, Rule-Base, and Defuzzification, - Fuzzy Logic Control (FCL). 3. Binary Genetic Algorithm (GA) . - Elements of GA, Genetic Operators, Initialization, Coding, Fitness Function ,Selection, Crossover (Mating), and Mutation</p>	<p>Intelligent Control Systems (مرحلة رابعة)</p>	<p>٤</p>

<p>1. Sampled Data Control Systems: Sampling and reconstruction, properties of sampled signal, ideal Sampler, Z.O.H.</p> <p>2. Analysis of Discrete Control System: Open-loop system, closed-loop system, system time-response, steady state error analysis, mapping S-plane /Z-plane.</p> <p>3. Stability Analysis: Bilinear transformation, Z into W, the Routh-Hurwitz criterion and Jury's stability test.</p> <p>4. Design of Digital Controllers: Direct design controller, dead-beat controller, PID controller, Design and realization, response between sampling instants, discrete Time equivalent controller, Root locus, Modified Z- transform.</p> <p>5. Time -Domain Analysis: -Impulse Response and step response for LTI processors (systems). -Digital convolution. -Difference equations.</p> <p>6. Frequency-Domain Analysis (I): -Discrete Fourier Transform (DFT), DFT for periodic sequences, DFT for aperiodic digital sequence, DFT properties. -Fast Fourier Transform (FFT). -Frequency Response of LTI processor.</p> <p>7. Frequency –Domain Analysis the Z-transform: Definition and properties of the Z-transform. Z-plane poles and Zeros.</p> <p>8. Design of Recursive digital filter (IIR): -Simple design based on Z-plane poles and zeros. -Filters derived from analog designs. -Frequency sampling filters.</p>	<p>Digital Control & DSP (مرحلة ثالثة + رابعة)</p>	<p>٥</p>
<p>1. Introduction of variables, decisions, repeating a block of statements and arrays.</p> <p>2. Data structure: Types, built in types, declaration types.</p> <p>3. Stack and queue: Declaration, design functions, applications.</p>	<p>Database and data Structure in C++ (المرحلة الرابعة)</p>	<p>٦</p>

<p>4. Single linked list: Declaration, design and applications.</p> <p>5. Graph and tree: Declaration, design and applications.</p>		
<p>1. Calculus: Limit and continuity, Differentiation, Integration, Series and sequence.</p> <p>2. Partial derivative.</p> <p>3. Vector valued function.</p> <p>4. Double integral.</p> <p>5. Fourier series and Laplace transform.</p> <p>6. Ordinary differential equations first order, linear set of equations.</p>	<p>Mathematics I (مرحلة اولى + ثانية)</p>	<p>٧</p>
<p>1. Linear algebra and Matrices: Vector, Solution of linear equations, Matrices.</p> <p>2. Ordinary differential equations: Series solution to ODE (power series solution, Legendre polynomial, Frobenius solution and Bessel's function) and Partial differential Equations.</p> <p>3. Complex Analysis.</p> <p>4. Numerical Analysis.</p>	<p>Mathematics II (مرحلة ثالثة)</p>	<p>٨</p>
<p>Bipolar Junction Transistor (BJT): Construction, Operation, Characteristics, Configuration (C.E, C.B, C.C), Ratings.</p> <p>D.C. Biasing and Thermal Stability: Biasing Techniques, Stability Factors, Effect of Temperature.</p> <p>Small Signal Analysis of BJT Amplifier: H-parameters Mode, re-model, Equivalent Circuit, Voltage Gain, Current Gain, Input Impedance, Output Impedance.</p> <p>Field Effect Transistor (FET): Construction, Types, Characteristics, Biasing and D.C. Analysis.</p> <p>FET Amplifiers: A.C. Analysis of Common Source, Common Drain,</p>	<p>Electronics I (مرحلة ثانية)</p>	<p>٩</p>
