

مواد الامتحان التنافسي لدراسة الدكتوراه في تخصص هندسة السيطرة

للعام الدراسي 2021-2022

| تفاصيل المفردات   | اسم المادة     | ت |
|---|----------------|---|
| <p><b>1- Ordinary differential equations:</b></p> <p>a) Solution to linear ordinary differential equation.</p> <p>b) Series solution to ODE (power series solution, Legendre polynomial, Frobenius solution and Bessel's function).</p> <p>c) Existence and Uniqueness.</p> <p><b>2- Complex Analysis:</b></p> <p>a) Complex plane, Limit and continuity, Analytic function.</p> <p>b) Elementary functions.</p> <p>c) Complex integration (Line integral using the representation of curve, Cauchy's integral theorem, Cauchy's integral formula).</p> <p>d) Infinite series in the complex plane (Convergence and divergence series, Power series, Laurent's expansion).</p> <p>e) The theory of residues (Residue integration method, Evaluation of real definite integral).</p> <p><b>3-Linear Algebra and Functional Analysis:</b></p> <p>a) Linear Systems of Equations (Gaussian Elimination).</p> <p>b) Matrix Algebra (Matrix Addition and Multiplication, Special Matrices and Transposes, Matrix Inverses, Basic Properties of Determinants).</p> <p>c) Vector Spaces and Subspaces (definition of vector spaces and linear transformation, Subspaces, Linear Combinations, Subspaces Associated with Matrices and Operators, Bases and Dimension).</p> <p>d) The Eigenvalue Problem (Definitions and Basic Properties, Similarity and Diagonalization, Orthogonal Diagonalization, the Singular Value Decomposition)</p> <p>e) Functional Analysis (Normed Linear Spaces and Banach Spaces, Inner Product and Hilbert Spaces)</p> <p><b>References:</b></p> <p>1) Erwin Kreyszig. Advanced Engineering Mathematics. by John Wiley &amp; Sons, 2011.</p> <p>2) Thomas S. Shores. Applied Linear Algebra and Matrix Analysis. Springer Science + Business Media, LLC, 2007.</p> | Mathematics    | 1 |
| <p><b>1- Feedback Analysis and Design</b></p> <p>a) Sensitivity Functions</p> <p>b) Internal Stability</p> <p>c) Performance Issues of Feedback Design</p> <p>d) Tradeoffs in Feedback Design</p> <p>e) Loop Shaping</p> <p><b>2- Model Uncertainty</b></p>   | Robust Control | 2 |

|  |                                    |          |
|--|------------------------------------|----------|
| <p>a) Additive and Multiplicative Uncertainty<br/> b) Uncertainty Weighting Function<br/> c) Robustness Analysis<br/> d) Robust Stability Analysis</p> <p><b>3-Robust Feedback Design</b></p> <p>a) Mixed Sensitivity<br/> b) Lower Fractional Transformation (LFT) and Upper Fractional Transformation (UTF)<br/> c) H2 and H-infinity Optimal Control</p> <p><b>References:</b></p> <p>1) Essentials of Robust Control<br/> Author: Zhou and Doyle<br/> Publisher: Prentice-Hall, 1988</p> <p>2) Robust Control Design, An Optimal Control Approach<br/> Author: Feng Lin<br/> Publisher: Wiley, 2007</p>  |                                    |          |
| <p><b>1- Knowledge Based Systems:</b></p> <p>a) Knowledge-Based Systems.<br/> b) Expert System.<br/> c) Rule-Based Systems.<br/> d) Rete algorithm, Conflict resolution, Forward-Chaining, Backward-Chaining.</p> <p><b>2- Artificial Neural Networks:</b></p> <p>a) Feed-forward Neural Network, Feedback Neural Network, Neural Processing, Learning and adaptation, Learning rules, Single-Layer and Multi-Layer Perceptron classifiers.<br/> b) Nonparametric training concept, Multilayer Feed-Forward Networks.<br/> c) Error back-propagation training and learning factors.<br/> d) Single Layer Feedback Networks.<br/> e) Spiking Neural Network.</p> <p><b>3-Fuzzy Logic Control:</b></p> <p>a) Foundations of Fuzzy Logic: Sets, Types of Memberships, Logical operations, If-Then Rules.<br/> b) Fuzzy Inference Systems.<br/> c) Fuzzy Logic Control (Continuous and discrete).<br/> d) Type-2 FLC and Interval Type-2 FLC.<br/> e) ANFIS.</p> <p><b>4- Genetic Algorithm (Binary and Continuous) :</b></p> <p>a) Components of a Binary GA, Selecting the Variables and Cost Function<br/> b) Variables Coding and Decoding<br/> c) Natural Selection methods (mating).<br/> d) Types of mating (Cross-Over).<br/> e) Mutations<br/> f) Next generation.<br/> g) Convergence.</p> <p><b>References:</b></p> | <p>Intelligent Control Systems</p> | <p>3</p> |

|  |                                 |          |
|--|---------------------------------|----------|
| <p>1)“Introduction to Artificial Neural Systems” By: Jacek M. Zurada, 1999.</p> <p>2) “Fuzzy Control” By: Kevin M. Passino and Stephen Yurkovich, 1998</p> <p>3) Practical Genetic Algorithms” By: Randy L. Haupt and Sue Ellen Haupt, 2004</p>  |                                 |          |
| <p><b>1-Calculus of Variations and Optimal Control</b></p> <p>a) Optimum of a Function and a Functional</p> <p>b) The Basic Variational Problem</p> <p>c) The Second Variation</p> <p>d) Extrema of Functions with Conditions</p> <p>e) Extrema of Functionals with Conditions</p> <p>f) Variational Approach to Optimal Control Systems</p> <p>    i-Terminal Cost Problem</p> <p>    ii- Different Types of Systems</p> <p>    iii- Sufficient Condition</p> <p><b>2- Linear Quadratic Optimal Control</b></p> <p>a) Problem Formulation</p> <p>b) Finite-Time Linear Quadratic Regulator</p> <p>    i-Symmetric Property of the Riccati Coefficient Matrix</p> <p>    ii-Optimal Control</p> <p>    iii- Optimal Performance Index</p> <p>    iv-Finite-Time Linear Quadratic Regulator</p> <p>c) Infinite-Time LQR System II</p> <p>    i- Meaningful Interpretation of Riccati Coefficient</p> <p>    ii- Analytical Solution of the Algebraic Riccati Equation.</p> <p>    iii- Infinite-Interval Regulator System:</p> <p>    iv- Stability Issues of Time-Invariant Regulator</p> <p>    v- Equivalence of Open-Loop and Closed-Loop Optimal Controls</p> <p><b>3- Constrained Optimal Control Systems</b></p> <p>a) Constrained Optimal Control</p> <p>    i- Time-Optimal Control of LTI System</p> <p>    ii- Problem Formulation and Statement</p> <p>    iii- Solution of the TOC System</p> <p>    iv- Structure of Time-Optimal Control System</p> <p>b) TOC of a Double Integral System</p> <p>    i- Problem Formulation and Statement.</p> <p>    ii- Problem Solution.</p> <p>    iii- Engineering Implementation of Control Law.</p> <p><b>References:</b><br/>Desineni Subbaram Naidu, <b>Optimal Control Systems</b>, CRC Press LLC, 2003.</p> | <p>Optimal Control</p>          | <p>4</p> |
| <p><b>1- Second order Systems</b></p> <p>a) Qualitative Behavior of Linear Systems.</p> <p>b) Multiple Equilibria.</p>   | <p>Nonlinear Control System</p> | <p>5</p> |

|  |                                |          |
|--|--------------------------------|----------|
| <p>c) Qualitative Behavior Near Equilibrium Points.<br/>d) Limit Cycles.</p> <p><b>2- Lyapunov Stability</b></p> <p>a) Basic Theorems of Lyapunov’s Method for Autonomous systems.<br/>b) The Invariance Principle.<br/>c) Stability of Perturbed Systems<br/>1- Vanishing Perturbation<br/>2- Nonvanishing Perturbation</p> <p><b>3- Feedback Control</b></p> <p>a) Control Problems<br/>b) Stabilization via Linearization<br/>c) Integral Control</p> <p><b>4- Feedback Linearization</b></p> <p>a) Feedback Linearizable System<br/>b) Input-Output Linearization</p> <p><b>5- Nonlinear Design Tools</b></p> <p>a) Lyapunov Redesign<br/>b) Backstepping</p> <p><b>References:</b></p> <p>1) H. K. Khalil, <b>Nonlinear Systems</b>, Prentice Hall, Upper Saddle River, New Jersey, 2002.<br/>2) J. J. E. Slotine and W. Li. <b>Applied Nonlinear Control</b>. Prentice Hall, Englewood Cliffs, NJ, 1991.</p> |                                |          |
| <p><b>1- Analysis of Control Systems in State Space:</b><br/>(The State Space Approach, Diagonalization, Cayley–Hamilton theorem, State Transition Matrix, Controllability, Observability, Solution of linear time invariant state equations, Solution of linear time varying state equations).</p> <p><b>2- Realization and Stability:</b> (Stability definitions, internal stability, BIBO stability).</p> <p><b>3- Pole-Placement Design using Full State Feedback:</b><br/>(Pole-Placement Regulator Design for single input plants, Pole-Placement Regulator design for Plant with Noise, Pole-Placement Design of Tracking systems)</p> <p><b>4- State observers:</b><br/>(Full order state Observers, Reduced Order State Observer, Ackerman’s formula)</p> <p><b>5- Kalman Filter:</b><br/>(Filtering of Random Signals, White Noise, State Estimation)</p>  | <p>Advanced Control Theory</p> | <p>6</p> |

|   |                                 |          |
